

## 2TouchPOS Credit Card Integration

2TouchPOS integrates with major credit card platforms. Here's what you and your processor need to know about the platforms for a successful partnership.

### Mercury

We have a direct integration to **Mercury** for credit card processing.

Platform	Also Known As	Batch Size Limit	Implementation Notes	Recommendation
Mercury	MPS	Practically Unlimited	Built into the software	Recommended

### Others

We work with the following credit card platforms through a 3rd party application, **Slipstream**. You must submit a **Slipstream** parameter sheet for the appropriate platform. The parameter sheets are below.

A notice from Midnite Express, makers of SlipStream:

*"Starting December 15th, 2011 processor changes will no longer be offered for versions prior to 4.0. If a customer needs a processor change, they will be required to upgrade to version 4.0."*

2TouchPOS Version 3.03.3700 is the first version to support Slipstream 4.0. Changing a processor might also require a 2TouchPOS upgrade\*.

\* The cost for this varies based on how old your version of 2 Touch is. Call for price. Can only batch out on Base Station.

**Slipstream** Credit Card Software      **\$395.00\*** (subject to change)

Platform	Also Known As	Batch Size Limit	Implementation Notes	Recommendation
5th 3rd	Banctech Payment Systems (BPS)	999		Caution! Batch size can be easily exceeded.
